FM September/December 2020 exam (20/21 Syllabus)

### Introduction

These sample questions show the likely style and range of **constructed response questions** that could be asked in the live exam.

You should use these questions to become familiar with the question types and the features and functionality contained within the live exam.

The practice exam is reflective of the constructed response section of the live exam but has some differences:

- The live exam will be timed however there is no time limit in this exam.
- Once you have started this exam you are able to leave at any time by closing the browser window. When you return, anything you have entered into the response options will be saved and you can continue sitting the exam.
- In the live exam your answers to the constructed response questions will be expert-marked. At the end of this exam you should use the solution material provided to assess your performance in the constructed response questions.
- You will be able to access solution material at the end of this exam when using the Self-Marking resources which include a Marking Guide and/or Sample Answer for each question. If you wish to access these without completing the questions, click on **End Exam** on the Item Review Screen and navigate to the Marking tab on the Dashboard to Self-Mark.

\$ Symbol   ▼ Highlight  Strikethrough  Calculator  Scratch Pad

**This scenario relates to three requirements.**

Spine Co is looking to spend \$15m to expand its existing business. This expansion is expected to increase profit before interest and tax by 20%. Recent financial information relating to Spine Co can be summarised as follows:

	<b>\$'000</b>
Profit before interest and taxation	13,040
Finance charges (interest)	240
Profit before taxation	<b>12,800</b>
Taxation	3,840
Profit for the year (earnings)	<b>8,960</b>

Spine Co is not sure whether to finance the expansion with debt or with equity. If debt is chosen, the company will issue \$15m of 8% loan notes at their nominal value of \$100 per loan note. If equity is chosen, the company will have a 1 for 4 rights issue at a 20% discount to the current market price of \$6.25 per share. Spine Co has 12 million shares in issue. The company pays corporation tax at 30%.

## Scenario 2

FM September/December 2020 exam (20/21 Syllabus)

Symbol Highlight Strikethrough Calculator Scratch Pad

This scenario relates to four requirements

Crocket Co is a manufacturing company that has three investment decisions for the coming year.

**Investment decision 1**

Six investment projects are being considered with the following details:

Project	Initial Outlay	Net Present Value
	\$'000	\$'000
A	1,000	390
B	1,500	Not yet known
C	750	325
D	1,125	590
E	1,850	840
F	1,300	635

Project B is expected to generate the following annual cash flows:

Year	1	2	3	4
	\$'000	\$'000	\$'000	\$'000
Sales income	725	765	885	612
Costs	145	168	202	94

Project B cash flows are before allowing for inflation of 4% per year for sales income and 5% per year for costs. Crocket Co has a nominal cost of capital of 10%.

Due to management reluctance to raise new finance, capital for investment in the above projects is currently restricted to \$5m. Projects A, B, D and F are all independent, but projects C and E are mutually exclusive. All of the above projects are divisible and none can be delayed or repeated.

**Investment decision 2**

A number of Crocket Co's employees have a company car. The entire company car fleet is now due for renewal and in the past, it has been replaced every four years. Management are not sure if this is the optimum length of time and feel that other fleet replacement cycles, such as every three or five years, should also be considered.

**Investment decision 3**

The management of Crocket Co are considering the financial viability of another project but as yet, no detailed financial information is available to perform an NPV appraisal. One of the reasons for this is that the various cash flows will be subject to a number of different rates of inflation that are very uncertain at present. For example, the selling price inflation may be no more than 2% per year whereas material cost inflation could be anything from 4% to 6% per year. The general rate of inflation is expected to differ from both of these. Management are not sure whether the appraisal could be performed by simply ignoring the inflation altogether.

Note: The \$5m capital constraint outlined with investment decision 1 applies to that investment decision only and not to investment decisions 2 and 3.

## Requirements for Scenario 2

(a) For investment decision 1:

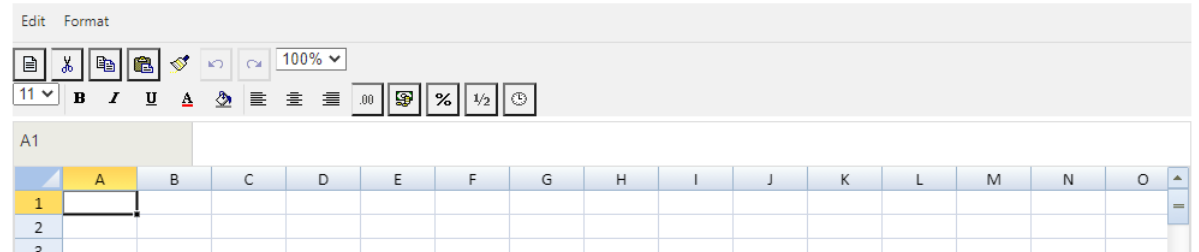

(i) Calculate the net present value of project B; and

(4 marks)

(ii) Given the capital constraint, calculate the optimum investment combination and the resulting net present value.
