Answers
Briefing notes

To: Maya Crag, Audit engagement partner
From: Audit manager
Subject: Eagle Group – Audit planning

Introduction

These briefing notes are prepared to assist with planning the audit of the Eagle Group (the Group) for the financial year ending 31 December 20X8. The notes contain an evaluation of the audit risks which should be considered in planning the Group audit. The notes also recommend the principal audit procedures to be used in the audit of the goodwill which has arisen in respect of a newly acquired subsidiary. The notes then go on to evaluate an extract from the audit strategy which has been prepared by a component auditor. Finally, the Group finance director has requested our firm to provide a non-audit service in relation to the Group’s integrated report, and the notes discuss the professional and ethical implications of this request.

(a) Evaluation of audit risk

Selected analytical procedures and associated audit risk evaluation

Operating margin and operating expenses

The Group’s operating margin has increased from 4·5% to 6·1% despite a fall in revenue of 3·7%. This is due to a reduction in operating expenses of 4·5% and increase in other operating income of 50%. Return on capital employed shows a similar positive trend, despite the fall in revenue. There is an audit risk that expenses are understated, with the reduction in expenses being proportionately more than the reduction in revenue.

Within operating expenses the trends for each component are different – cost of raw materials consumables and supplies has decreased by 3·1%, which appears reasonable given the decline in revenue of 3·7%. However, staff costs have increased slightly by 1·1% which seems inconsistent with the revenue trend and with the increased automation of operations which has led to 5,000 staff being made redundant, which presumably means lower payroll costs this year. Expenses could have been misclassified into staff costs in error.

Depreciation, amortisation and impairment has increased by 3·6%, which is not a significant change, but will need to be investigated to consider how each element of the category has changed in the year. The most noticeable trend within operating expenses is that the other operating expenses category has reduced very significantly. The amount recognised this financial year is only 7·4% of the amount recognised the previous year; this appears totally inconsistent with the other trends noted. It could be that some costs, for example, accrued expenses, have not yet been accounted for, or that the 20X7 figure was unusually high.

Other operating income

There is also an audit risk that other operating income is overstated. According to the information in note 6, during the year a credit of $60 million has been recognised in profit for reversals of provisions, this is 50% greater than the amount recognised in the previous year. In addition, a credit of $30 million has been recognised for reversals of impairment losses. There is a risk that these figures have been manipulated in order to boost profits, as an earnings management technique, in reaction to the fall in revenue in the year.

The risk of management bias is high given the listed status of the Group, hence expectations from shareholders for a positive growth trend. The profit recognised on asset disposal and the increase in foreign currency gains could also be an indication of attempts to boost operating profit this year.

Current ratio and gearing

Looking at the other ratios, the current ratio and gearing ratio do not indicate audit risks; however, more detail is needed to fully conclude on the liquidity and solvency position of the Group, and whether there are any hidden trends which are obscured by the high level analysis which has been performed with the information provided.

The interest cover has increased, due to both an increase in operating profit and a reduction in finance charges. This seems contradictory to the increase in borrowings of $50 million; as a result of this an increase in finance charges would be expected. There is an audit risk that finance charges are understated.
Effective tax rate

The effective tax rate has fallen from 25% to 19·9%. An audit risk arises in that the tax expense and associated liability could be understated. This could indicate management bias as the financial statements suggest that accounting profit has increased, but the profit chargeable to tax used to determine the tax expense for the year appears to have decreased. There could be alternative explanations, for instance a fall in the rate of tax levied by the authorities, which will need to be investigated by the audit team.

Consolidation of foreign subsidiaries

Given that the Group has many foreign subsidiaries, including the recent investment in Lynx Co, audit risks relating to their consolidation are potentially significant. Lynx Co has net assets with a fair value of $300 million according to the goodwill calculation provided by management, representing 8·6% of the Group’s total assets and 13·4% of Group net assets. This makes Lynx Co material to the Group and possibly a significant component of the Group. Audit risks relevant to Lynx Co’s status as a foreign subsidiary also attach to the Group’s other foreign subsidiaries.

According to IAS® 21 *The Effects of Changes in Foreign Exchange Rates*, the assets and liabilities of Lynx Co and other foreign subsidiaries should be retranslated using the closing exchange rate. Its income and expenses should be retranslated at the exchange rates at the dates of the transactions. The risk is that incorrect exchange rates are used for the retranslations. This could result in over/understatement of the assets, liabilities, income and expenses which are consolidated, including goodwill. It would also mean that the exchange gains and losses arising on retranslation and to be included in Group other comprehensive income are incorrectly determined.

In addition, Lynx Co was acquired on 1 March 20X8 and its income and expenses should have been consolidated from that date. There is a risk that the full year’s income and expenses have been consolidated, leading to a risk of understatement of Group profit given that Lynx Co is forecast to be loss making this year, according to the audit strategy prepared by Vulture Associates.

Measurement and recognition of exchange gains and losses

The calculation of exchange gains and losses can be complex, and there is a risk that it is not calculated correctly, or that some elements are omitted, for example, the exchange gain or loss on goodwill may be missed out of the calculation.

IAS 21 states that exchange gains and losses arising as a result of the retranslation of the subsidiary’s balances are recognised in other comprehensive income. The risk is incorrect classification, for example, the gain or loss could be recognised incorrectly as part of profit for the year, for example, included in the $28 million foreign currency gains which form part of other operating income, which would be incorrect. The amount recognised within other operating income has increased, as only $23 million foreign currency gains were recognised the previous year, indicating a potential risk of overstatement.

Goodwill

The total goodwill recognised in the Group statement of financial position is $1,100 million, making it highly material at 31·5% of total assets.

Analytical review shows that the goodwill figure has increased by $130 million during the year. The goodwill relating to the acquisition of Lynx Co is $100 million according to management’s calculations. Therefore there appears to be an unexplained increase in value of goodwill of $30 million during the year and there is an audit risk that the goodwill figure is overstated, unless justified by additional acquisitions or possibly by changes in value on the retranslation of goodwill relating to foreign subsidiaries, though this latter point would seem unlikely given the large size of the unexplained increase in value.

According to IFRS® 3 *Business Combinations*, goodwill should be subject to an impairment review on an annual basis. Management has asserted that while they will test goodwill for impairment prior to the financial year end, they do not think that any impairment will be recognised. This view is based on what could be optimistic assumptions about further growth in revenue, and it is likely that the assumptions used in management’s impairment review are similarly overoptimistic. Therefore there is a risk that goodwill will be overstated and Group operating expenses understated if impairment losses have not been correctly determined and recognised.

Initial measurement of goodwill arising on acquisition of Lynx Co

In order for goodwill to be calculated, the assets and liabilities of Lynx Co must have been identified and measured at fair value at the date of acquisition. Risks of material misstatement arise because the various components of goodwill each have specific risks attached. The goodwill of $100 million is material to the Group, representing 2·9% of Group assets.

A specific risk arises in relation to the fair value of net assets acquired. Not all assets and liabilities may have been identified, for example, contingent liabilities and contingent assets may be omitted.

A further risk relates to measurement at fair value, which is subjective and based on assumptions which may not be valid. The fair value of Lynx Co’s net assets according to the goodwill calculation is $300 million, having been subject to a fair value uplift of $12 million. This was provided by an independent firm of accountants, which provides some comfort on the validity of the figure.

There is also a risk that the cost of investment is not stated correctly, for example, that the contingent consideration has not been determined on an appropriate basis. First, the interest rate used to determine the discount factor is 18% – this seems high given that the Group’s weighted average cost of capital is stated to be 10%. Second, the contingent consideration is only payable if Lynx Co reaches certain profit targets. Given that the company, according to Vulture Associate’s audit strategy, is projected to be loss making, it could be that the contingent consideration need not be recognised at all, or determined to be

16
a lower figure than that currently recognised, based on a lower probability of it having to be paid. The results of the analytical review have indicated that the other side of the journal entry for the contingent consideration is not described as a component of the non-current liabilities and the accounting for this will need to be clarified as there is a risk that it has been recorded incorrectly, perhaps as a component of equity.

Intangible assets

In relation to expenditure on intangible assets during the year, which totals $60 million, there are several audit risks. First, there is a question over whether all of this amount should have been capitalised as an intangible asset. Capitalisation is only appropriate where an asset has been created, and specifically in relation to development costs, the criteria from IAS 38 Intangible Assets must all be met. There is a risk that if any criteria have not been met, for example, if there is no probable future economic benefit from research into the new technology, then the amount should be expensed. There is a risk that intangible assets are overstated and operating expenses understated.

There is also an unexplained trend, in that intangible assets has only increased by $30 million, yet expenditure on intangible assets, according to management information, is $60 million. More information is needed to reconcile the expenditure as stated by management to the movement in intangible assets recognised in the Group statement of financial position.

Second, there is a risk that the amortisation period is not appropriate. It seems that the same useful life of 15 years has been applied to all of the different categories of intangible assets; this is not likely to be specific enough, for example, the useful life of an accounting system will not be the same as for development of robots. Fifteen years also seems to be a long period – usually technology-related assets are written off over a relatively short period to take account of rapid developments in technology. In respect of amortisation periods being too long, there is a risk that intangible assets are overstated and operating expenses understated.

Detection risk in relation to Lynx Co

Lynx Co is the only subsidiary which is not audited by Bison & Co. This gives rise to a risk that the quality of the audit of Lynx Co may not be to the same standard as Bison & Co, as Vulture Associates may not be used to auditing companies which form part of a listed group and results in increased detection risk at the Group level. The risk is increased by the problems with the audit strategy prepared by Vulture Associates, which will be discussed in part (c) to these briefing notes, which indicate that the audit of Lynx Co has not been appropriately planned in accordance with ISA requirements. Since our firm has not worked with Vulture Associates previously, we are not familiar with their methods and we may have issues with the quality of their work; therefore the detection risk is high in relation to Lynx Co's balances which will form part of the consolidated financial statements.

(b) Principal audit procedures on the goodwill arising on the acquisition of Lynx Co

- Obtain the legal documentation pertaining to the acquisition, and review to confirm that the figures included in the goodwill calculation relating to consideration paid and payable are accurate and complete. In particular, confirm the targets to be used as the basis for payment of the contingent consideration in four years’ time.
- Also confirm from the purchase documentation that the Group has obtained an 80% shareholding and that this conveys control, i.e. the shares carry voting rights and there is no restriction on the Group exercising their control over Lynx Co.
- Agree the $80 million cash paid to the bank statement and cash book of the acquiring company (presumably the parent company of the Group).
- Review the board minutes for discussions relating to the acquisition, and for the relevant minute of board approval.
- For the contingent consideration, obtain management’s calculation of the present value of $271 million, and evaluate assumptions used in the calculation, in particular to consider the probability of payment by obtaining revenue and profit forecasts for Lynx Co for the next four years.
- Discuss with management the reason for using an 18% interest rate in the calculation, asking them to justify the use of this interest rate when the Group’s weighted average cost of capital is stated at 10%.
- Evaluate management’s rationale for using the 18% interest rate, concluding as to whether it is appropriate.
- Confirm that the fair value of the non-controlling interest has been calculated based on an externally available share price at the date of acquisition. Agree the share price used in management’s calculation to stock market records showing the share price of Lynx Co at the date of acquisition.
- Obtain a copy of the due diligence report issued by Sidewinder & Co, review for confirmation of acquired assets and liabilities and their fair values.
- Evaluate the methods used to determine the fair value of acquired assets, including the property, and liabilities to confirm compliance with IFRS 3 and IFRS 13 Fair Value Measurement.
- Review the calculation of net assets acquired to confirm that Group accounting policies have been applied.

(c) Evaluation of the extract of the audit strategy prepared by Vulture Associates in respect of their audit of Lynx Co

The extract from the audit strategy covers two areas – reliance on internal controls, and the use of internal audit for external audit work. In each area it appears that ISA requirements have not been followed, meaning that the quality of the audit planned by Vulture Associates is in doubt.
Controls effectiveness

In relation to reliance on internal controls, ISA 330 The Auditor’s Responses to Assessed Risks contains requirements in relation to relying on work performed during previous audits on internal controls. ISA 330 states that if the auditor plans to use audit evidence from a previous audit about the operating effectiveness of specific controls, the auditor shall establish the continuing relevance of that evidence by obtaining audit evidence about whether significant changes in those controls have occurred subsequent to the previous audit. The auditor shall obtain this evidence by performing inquiry combined with observation or inspection, to confirm the understanding of those specific controls, and if there have been changes which affect the continuing relevance of the audit evidence from the previous audit, the auditor shall test the controls in the current audit. If there have not been such changes, the auditor shall test the controls at least once in every third audit, and shall test some controls each audit to avoid the possibility of testing all the controls on which the auditor intends to rely on a single audit period with no testing of controls in the subsequent two audit periods.

Therefore, in order to comply with ISA 330, Vulture Associates needs to do more than simply accept management’s assertion that there have been no changes to controls. There needs to be some observation or inspection of controls, to confirm that there have been no changes, and this work and an appropriate conclusion need to be documented in the audit working papers.

In addition, there should be some testing of internal controls each year, so Vulture Associates should plan to perform some tests of controls each year, so that over a three-year cycle, all controls are tested to confirm that controls are still operating effectively and therefore can continue to be relied upon.

The Group audit team should discuss this issue with Vulture Associates to ensure that adequate controls testing is performed. If, for some reason, Vulture Associates does not amend its audit strategy, then the Group audit team may decide to perform additional testing, given that Lynx Co is material to the Group.

Internal audit

According to ISA 610 Using the Work of Internal Auditors, it is acceptable, in some circumstances, for the external audit firm to use the internal audit function of an audited entity to provide direct assistance to the external audit team. However, in some jurisdictions, due to local regulations, the external auditor is prohibited from using internal auditors to provide direct assistance, and therefore the Group auditor team will need to consider whether the prohibition also extends to component auditors and, if so, it would not be appropriate for Vulture Associates to use the internal audit function. Assuming that there is no local restriction, before deciding whether to use the internal audit function, the external auditor must evaluate a number of factors, including:

- The extent to which the internal audit function’s organisational status and relevant policies and procedures support the objectivity of the internal auditors.
- The level of competence of the internal audit function.
- Whether the internal audit function applies a systematic and disciplined approach, including quality control.

Vulture Associates must therefore perform this evaluation before making any decision about whether they should instruct the internal audit team to perform audit procedures. For example, if they find that the internal audit function does not have a good quality control procedure, it would not be appropriate to use them in external audit work.

Using the internal audit function to perform audit procedures is direct assistance to the external auditor. ISA 610 requires that where direct assistance is being provided, the external auditor shall evaluate the existence and significance of threats to objectivity and the level of competence of the internal auditors who will be providing such assistance. The external auditor shall not use an internal auditor to provide direct assistance if there are significant threats to the objectivity of the internal auditor or the internal auditor lacks sufficient competence to perform the proposed work. Vulture Associates therefore needs to document and conclude upon their assessment of the internal auditors’ objectivity and competence.

There is also an issue with regard to the type of work they are given to perform. Vulture Associates is planning to ask the internal auditors to perform specific audit procedures in relation to trade receivables but this is not likely to be appropriate. ISA 610 states that the external auditor shall make all significant judgements in the audit engagement. Performing a trade receivables circularisation and reviewing the allowance against trade receivables both involve judgements, in relation to sample selection and also in relation to measurement of the receivables. The trade receivables is also likely to be a material balance in the financial statements. Therefore it would not be appropriate for the internal audit team to complete the audit, though they could be used for performing routine procedures not involving the use of judgement.

A further issue is that ISA 610 specifically states that the external auditor shall not use internal auditors to provide direct assistance to perform procedures which relate to work with which the internal auditors have been involved and which has already been, or will be, reported to management or those charged with governance. From the audit strategy, it appears that the internal audit function has worked on trade receivables during the year, so it would not be appropriate for the internal auditors to provide direct assistance to the external audit firm in relation to this area due to the self-review threat which would be created.

It may be possible for the internal auditors to provide direct assistance on non-judgemental areas of the financial statements if they have not performed internal audit work relating to those areas during the year.

In conclusion, from the evaluation of this extract from the audit strategy, it seems that Vulture Associates is planning to carry out the audit of Lynx Co in a manner which does not comply with ISA requirements. This is a concern, given the materiality of the subsidiary to the Group, and our firm should liaise with Vulture Associates as soon as possible to discuss their audit planning.
(d) Ethical and professional implications of the request to provide a non-audit service on the Group's integrated report

There are several issues to consider with regard to providing this service.

A significant issue relates to auditor objectivity. The IESBA Code of Ethics for Professional Accountants (the Code) provides guidance on situations where the auditor is asked by the client to provide non-assurance services. Bison & Co needs to evaluate the significance of the threat and consider whether any safeguards can reduce the threat to an acceptable level.

While the integrated report is not part of the audited financial statements, the report will contain financial key performance indicators (KPIs), and the Group has asked for input specifically relating to the reconciliations between these KPIs and financial information contained in the financial statements. There is therefore a potential self-review threat to objectivity in that the audit firm has been asked to provide assurance on these KPIs which are related to figures which have been subject to external audit by the firm. The team performing the work will be reluctant to raise queries or highlight errors which have been made during the external audit when assessing the reconciliations of KPIs to audited financial information.

It could also be perceived that Bison & Co is taking on management responsibility by helping to determine content to be included in the integrated report, which is a threat to objectivity. The Code states that the audit firm shall not assume management responsibility for an audit client and that the threats created are so significant that safeguards cannot reduce them to an acceptable level. While the Code does not specifically state that helping the client to determine the content of its integrated report is taking on management responsibility, certainly there could be that perception as the auditor will be involved in setting measurements which the company will benchmark itself against. Additionally, working with management on the integrated report could create a familiarity threat to objectivity whereby close working relationships are formed, and the auditor becomes closely aligned with the views of management and is unable to approach the work with an appropriate degree of professional scepticism.

There is a potential problem in terms of compliance with ISA 720 The Auditor’s Responsibilities Relating to Other Information, should Bison & Co accept the engagement. ISA 720 requires that auditors read other information in order to identify any material inconsistencies between the financial statements and information in the other information. ISA 720 applies only to other information in the annual report, and it is not stated whether the Group's integrated report will be included in the annual report, or as a standalone document.

Based on the above, it would seem unlikely that Bison & Co can provide this service to the Group, due to the threats to objectivity created. However, should the firm decide to take on the engagement, safeguards should be used to minimise the threats. For example, a partner who is independent should be involved in reviewing the audit work performed.

Aside from ethical issues, Bison & Co must also consider whether they have the competence to perform the work. Advising on the production of an integrated report is quite a specialist area, and it could be that the audit firm does not have the appropriate levels of expertise and experience to provide a quality service to the Group. The fact that the Group wants to highlight its technological achievements, and presumably will select a range of non-financial KPIs and technological issues to discuss in the integrated report, makes the issue of competence more significant, as the audit firm may not have the necessary technical knowledge to provide advice in this area. Aside from competence, the firm should also consider whether it has resources in terms of staff availability to complete the work to the desired deadline and to perform appropriate reviews of the work which has been completed.

Finally, given that the Group is a listed entity, it should comply with relevant corporate governance requirements. This means that the audit firm may be prohibited from providing services in addition to providing the external audit to the Group. The audit committee should apply the Group’s policy on the engagement of the external auditor to supply non-audit services, the objective of which should be to ensure that the provision of such services does not impair the external auditor’s independence or objectivity. The Group’s audit committee will need to pre-approve the provision of the service, and in making this decision they should consider a number of matters, for instance, the audit committee should consider whether the skills and experience of the audit firm make it the most suitable supplier of the non-audit service, whether there are safeguards in place to eliminate or reduce to an acceptable level any threat to objectivity and the level of fees to be incurred relative to the audit fee.

Conclusion

These briefing notes indicate that there are a large number of audit risks to be considered in planning the audit, and that management needs to supply the audit team with a range of additional information for more thorough audit planning to be carried out. The audit of goodwill, and in particular the goodwill arising on the acquisition of Lynx Co, is an area of significant audit risk, and the notes recommend the principal audit procedures which should be conducted. An evaluation of the audit strategy prepared by Vulture Associates indicates that their audit of Lynx Co might not be a high quality audit. Finally, our firm needs to discuss the request to assist in preparing the Group’s integrated report with the Group audit committee, and it seems unlikely given the threat of management involvement that we would be able to carry out this work for the Group.

2 (a) Clark Co

(i) Matters to be discussed with management in relation to the audit supervisor’s proposed adjustments

Lease of testing equipment

The lease at Clark Co’s largest site is material to the statement of financial position at 2.2% of total assets. The leases at the other two sites are also material at 2.8% of total assets.

The general recognition and measurement requirements of IFRS 16 Leases require lessees to recognise a right-of-use asset and a lease liability at the commencement date of the lease at the present value of the lease payments. The standard
defines the commencement date as the date the asset is available for use by the lessee. Given that the commencement
date is 31 May 20X8 therefore, it is appropriate on this basis to recognise the lease on the statement of financial position
as at this date.

It is significant, however, that IFRS 16 also contains an optional exemption for short-term leases of less than 12 months’
duration with no purchase option. If Clark Co elects to apply this exemption, it does not recognise the leased assets or
lease liabilities on the statement of financial position but rather, it recognises the lease payments associated with those
leases as an expense in the statement of profit or loss for the year on either a straight-line basis over the lease term or
another systematic basis. However, IFRS 16 also requires that if this exemption is taken, it must be applied consistently
by each class of underlying asset. Hence in this case, the client must either capitalise the leases across all three of the
sites or apply the exemption consistently and not capitalise the leases across any of the sites. On either of these bases, as
the commencement date of the lease coincides with the reporting date, there would not yet be any impact on Clark Co's
statement of profit or loss for the year.

The audit manager should discuss the option of taking the short-term lease exemption with the finance director at
tomorrow’s meeting:

(i) If the client elects not to take the exemption across the three sites, assets and liabilities will be materially understated.
    Hence the audit supervisor’s proposed adjustment is correct and a right-of-use asset and lease liability of $475,000
    should be recognised on the statement of financial position.

(ii) Alternatively, if the client does elect to take the exemption across all three sites, then assets and liabilities are
    materially overstated and right-of-use assets and lease liabilities of $625,000 should be derecognised on the
    statement of financial position.

Impact on audit opinion:
If the client does not make any adjustment to the financial statements, the statement of financial position is materially
misstated on the basis of misapplication of an accounting standard and the audit opinion should be qualified on this basis
with an ‘except for’ opinion.

(ii) Legal claim
The legal claim is material to the statement of financial position being 5.5% of Clark Co's total assets.

Following the requirements of IAS 37 Provisions, Contingent Liabilities and Contingent Assets, a provision should be
recognised when: an entity has a present obligation (legal or constructive) as a result of a past event; it is probable that
an outflow of resources embodying economic benefits will be required to settle the obligation; and a reliable estimate can
be made of the amount of the obligation. In this case the customer has already won the action against the company, the
amount of the claim has been agreed by the courts and settlement is still outstanding at the reporting date. Hence, a
provision of $1.2 million should be recognised on the statement of financial position.

IAS 37 also states that contingent assets are not recognised in financial statements since this may result in the recognition
of income which may never be realised. However, the standard continues by stating that when the realisation of income
is virtually certain, then the related asset is not a contingent asset and its recognition is appropriate. With respect to Clark
Co’s insurance claim therefore and the verified letter dated 25 May 20X8, the settlement of the claim as at the reporting
date is virtually certain and an asset should be recognised separately on the statement of financial position.

The audit supervisor’s proposed adjustment is correct and the finance director should therefore be requested to adjust the
financial statements to include the separate recognition of the asset and the provision. If the adjustment is not made, both
assets and liabilities will be materially misstated. There is no net impact on the statement of profit or loss for the year.

The finance director should also be advised that the financial statements should include full disclosure of the facts and
amounts surrounding the provision for the legal claim together with full details of the expected reimbursement from the
insurance company recognised as an asset.

Impact on audit opinion:
If the client does not make any adjustment to the financial statements, the statement of financial position is materially
misstated and the audit opinion should be qualified on this basis with an ‘except for’ opinion.

(iii) Asset impairment
The asset impairment of $85,000 is not material in isolation to either the statement of financial position (0.4% of total
assets) or the statement of profit or loss for the period (3.7% of profit before taxation).

According to IAS 36 Impairment of Assets, an entity should assess at the end of each reporting period whether there
is any indication that an asset or a cash generating unit may be impaired. If any such indication exists, the entity shall
estimate the recoverable amount of the asset. The standard states that potential impairment indicators include external
sources of information such as significant changes in the market in which the entity operates. As each of Clark Co's sites
is considered a cash generating unit for impairment review purposes it seems appropriate therefore for the company to
have conducted an impairment review at this site.

IAS 36 states that an asset or cash generating unit is impaired when the carrying amount exceeds the recoverable amount
and it defines recoverable amount as the higher of the fair value less costs of disposal and the value in use. In the case
of Clark Co, the auditor has agreed figures for carrying value and value in use and the key issue is the correct calculation
of fair value less costs of disposal. Following IAS 36, the costs of disposal should include legal costs, transaction taxes
and the costs of removing the assets but should exclude the costs associated with reorganising a business. The correct amount for fair value less costs of disposal is therefore $3,515,000 ($3·9 million – $126,000 – $174,000 – $85,000). Given that this is higher than the value in use of $2·9 million, the recoverable amount of the assets is also $3,515,000 and therefore the assets are impaired by $85,000 ($3·6 million – $3,515,000). The client appears to have incorrectly omitted the costs of removing the assets from its calculation of fair value less costs of disposal and as a result the statement of financial position and the statement of profit or loss for the year are both overstated by $85,000.

The audit supervisor’s proposed adjustment is therefore correct and the finance director should be advised of this error at tomorrow’s meeting. Even though the amount is immaterial to both the statement of financial position and statement of profit or loss for the year, it is appropriate to request that the adjustment is made to the financial statements.

Impact on audit opinion:

Given that assets and profits are both immaterially overstated, if no adjustment is made to the financial statements, it follows that there will be no impact on the audit opinion in relation to this matter in isolation.

(b) Turner Co

Ethical and professional issues and actions to be taken by the audit firm

Loan to member of the audit team

According to the IESBA Code of Ethics for Professional Accountants (the Code), a loan to a member of the audit team may create a threat to the auditor’s independence. If the loan is not made under normal lending procedures, and terms and conditions, a self-interest threat would be created as a result of Janette Stott’s financial interest in the audit client. The self-interest threat arises because of the potential personal benefit derived which may motivate the audit team member to behave in a manner aimed at protecting that benefit. Such a threat would be so significant that no safeguards could reduce the threat to an acceptable level. It follows therefore that the audit team member should not accept such a loan or guarantee. The Code, however, also states that a loan from an audit client which is a bank or similar institution to a member of the audit team which is made under normal lending procedures, is acceptable. Examples of such loans include home mortgages, car loans and credit card balances.

It is possible therefore that the secured loan may be ethically acceptable and the key issue is whether ‘the very best terms which the bank can offer’ fall within Turner Co’s normal lending procedures, and terms and conditions. The bank’s standard lending terms and conditions should be obtained and reviewed alongside the documentation for Janette Stott’s loan. Ultimately, the audit engagement partner is responsible for ensuring that ethical principles are not breached, so the partner should be involved with the discussions. The matter should be discussed with Janette and the client’s business manager in order to establish whether the loan is to be made under the bank’s normal lending procedures. Janette should be advised of the outcome of the review and Turner Co’s business manager should be advised of this decision, explaining the rationale and ethical rules behind it.

Temporary staff assignment

The Code states that the lending of staff to an audit client may create a self-review threat to auditor independence. The self-review threat arises when an auditor reviews work which they themselves have previously performed – for example, if the external auditor is involved in the process of preparing the payroll figures for inclusion in the financial statements and then audits them. As a result, there is a risk that the auditor would not be sufficiently objective in performing the audit and may fail to identify any shortcomings in their own work. In addition, there is a risk of the staff member assuming management responsibilities if they are involved in making judgments and decisions which are the remit of management.

Such assistance can only therefore be given for a short period of time and the audit firm’s staff must not assume management responsibilities and must not be involved in any activities specifically prohibited. According to the Code, an audit firm cannot provide accounting and bookkeeping services (including payroll) to an audit client which is a public interest entity unless the services relate to matters which are collectively immaterial to the financial statements.

In this case Turner Co is a listed bank and is therefore a public interest entity. The assignment of a qualified member of staff as a supervisor on the client’s main payroll system is likely to be material to the financial statements of a service industry client such as a bank and, in addition, may also involve management responsibilities. The audit manager should therefore discuss details of the proposed role of the seconded member of staff with the payroll manager and other key client contacts in order to establish the significance of the role and its materiality to the financial statements. Assuming that the role is material, the audit manager should decline the proposed staff assignment.

3 (a) Narley Co

(i) Matters to be considered before acceptance of engagement

When considering acceptance of the engagement to review Narley Co’s prospective financial information (PFI), Jansen & Co must consider whether it is ethically acceptable to perform the review. The review of the PFI represents a non-assurance service and the IESBA Code of Ethics for Professional Accountants (the Code) states that providing this service in addition to the audit may create an advocacy threat. An advocacy threat arises when the auditor is asked to promote or represent their client in some way. In this situation there is a risk of the auditor being seen to promote the interests of the client with a third party such as a bank. As a result, there is a danger that the auditor will be biased in favour of the client and therefore cannot be fully objective. Accepting the assignment may also create a self-interest threat as a result of the auditor
being perceived to have an interest in the outcome of negotiations with a third party and which may motivate the auditor
to behave in order to protect that interest. A self-review threat may also arise because the negotiations may result in facts
and amounts which will form part of the audited financial statements. As a result, the auditor will be auditing financial
statements which in part at least represent work which they themselves have performed. It follows that there is a risk that
the auditor will not be sufficiently objective in performing the audit and may fail to identify any shortcomings in their own
work.

In the case of Narley Co, the advocacy threat appears to be particularly significant as the audit firm could be seen to
be promoting the interests of the audit client to the bank. The auditor should therefore only accept the engagement
if adequate safeguards can be put in place to manage the threat to independence to an acceptable level. Potential
safeguards might include the following:

– The use of separate teams of suitably experienced staff for the audit and the review of the PFI;
– Independent senior review of the PFI working papers;
– Discussion of the potential ethical issues and threats to auditor independence with those charged with governance
at Narley Co.

It should be noted, however, that it would not be possible to manage a significant advocacy threat through such safeguards
and in such a case the appointment should not be accepted.

ISAE 3400 The Examination of Prospective Financial Information provides further guidance on the issues which the
auditor should consider before accepting an engagement to examine PFI. According to ISAE 3400, the auditor should
consider amongst other things:

– The intended use of the information – for example, whether it will be used solely for the purpose of the proposed
loan finance;
– Whether the information will be for general or limited distribution – the auditor needs to consider who will receive
the report and potentially rely upon it;
– The nature of the assumptions, that is, whether they are best-estimate or hypothetical assumptions – in this case it
seems likely that they will be best estimate assumptions as Narley Co expects to obtain finance in order to fund its
planned expansion;
– The elements to be included in the information – Jansen & Co needs to clarify the exact content of the PFI which
they are being asked to report on, for example, whether it only includes the forecast statements of profit or loss or
whether it also includes forecast statements of financial position and forecast cash flow statements; and
– The period covered by the information – shorter term forecasts are likely to be more reliable than projections over a
longer period.

Jansen & Co must also consider whether the firm has sufficient staff available with the appropriate skills and experience
to perform the review engagement in line with the client’s required reporting deadlines.

Overall, the auditor must assess the risks associated with the review engagement and should not accept an engagement
when the assumptions are clearly unrealistic or when the auditor believes that the prospective financial information will
be inappropriate for its intended use.

(ii) Examination procedures to be performed

The examination procedures which should be performed in respect of Narley Co’s forecast statements of profit or loss
include the following:

– The arithmetic accuracy of the forecast statements of profit or loss should be confirmed;
– Confirmation that the accounting policies used in the forecast statements are consistent with those used in the
audited financial statements and that they comply with IFRS;
– Discuss the key assumptions which have been made by the client in the preparation of the forecast statements
with management assessing their reasonableness and consistency with the audit firm’s cumulative knowledge and
understanding of the client;
– Review of market research documentation in Narley Co’s existing markets and the new market and discuss it with
management to assess whether the growth patterns being forecast in revenue represent reasonable and realistic
expectations;
– Obtain copies of any new customer contracts for existing and new markets to confirm the reasonableness of the
projected growth in revenue.
– Obtain a written representation from management confirming the reasonableness and completeness of the
assumptions they have made in preparing the forecasts;
– The competence and experience of the client staff who have prepared the forecasts should be assessed; the
assessment should include the accuracy of PFI which has been prepared in previous periods and the reasons for
any significant variances compared to actual outcomes;
– Recalculation of depreciation to ensure the correct inclusion of depreciation on the new HGVs and warehousing
facilities within the forecast statements;
– Obtain and review a breakdown of operating expenses in order to ensure that all items have been appropriately included, for example: advertising and marketing costs for the campaign in the new jurisdiction; additional staff costs for the new drivers including recruitment expenses; any trading tariffs relevant to operating in the new market and any foreign currency and exchange implications;
– Recent utility bills should be inspected and an assessment of the reasonableness of forecast utility overheads should be performed;
– Obtain and review the supporting documentation for Narley Co’s existing loan agreements with the bank as well as the draft documentation for the new loan; the forecast finance costs should be recalculated and agreed to the forecast statements;
– Perform analytical review, followed by discussion with management to seek corroborating evidence of key trends and ratios including:
  – Growth in revenue (26% from 20X8 to 20X9; 29% from 20X9 to 20Y0)
  – Cost of sales as a percentage of revenue (75·5% in 20X8; 71·3% in 20X9; 69·7% in 20Y0)
  – The declining trend in administrative expenses (decrease of 4·2% from 20X8 to 20X9; 5·6% from 20X9 to 20Y0)
  – The increase in the net profit margin (6·9% in 20X8; 15·2% in 20X9; 20·4% in 20Y0).

(b) Watson Co

Quality control issues raised by the audit supervisor’s email

ISA 220 Quality Control for an Audit of Financial Statements requires the auditor to implement quality control procedures at the engagement level which provide reasonable assurance that the audit complies with professional standards and applicable legal and regulatory requirements and that the auditor’s report is appropriate in the circumstances. The overall quality of each audit assignment is the responsibility of the audit engagement partner and effective engagement performance entails adequate direction, consultation, supervision and review. In this case, the conduct of the audit raises a number of quality control issues in relation to the effective performance of the audit of Watson Co’s financial statements, including the following:

Share-based payment scheme:

The failure to identify the new cash-settled share-based payment scheme as a potentially high risk area indicates inadequate planning and a lack of consultation with the client. The share-based payment scheme is a complex and judgemental area and given that the scheme was only introduced in the year, it should have been identified as a key area of audit risk.

The assignment of a part-qualified supervisor to the audit of a listed entity is also indicative of poor audit planning. The audit supervisor appears to have inadequate skills and expertise to audit this public interest entity. This is evidenced by the incorrect treatment of the share-based payment scheme and the audit supervisor’s comment that basing the expense in the profit or loss account on the valuation at the date of grant is inappropriate and that the recognition of an equity reserve on the statement of financial position is correct in the email to the audit manager. According to IFRS 2 Share-based Payments, the valuation of the share appreciation rights for a cash-settled scheme should be updated at the reporting date and the standard requires recognition of the cumulative cost of the scheme as a liability, not as an equity reserve.

The audit supervisor also fails to recognise that a share-based payment scheme with the directors of Watson Co constitutes a related party transaction. While the supervisor is correct in saying that the cost of the scheme this year of $195,000 is immaterial on a quantitative basis (it represents only 0·36% of profit before taxation and 0·84% of total assets), as a related party transaction with directors, the scheme should be considered to be material by nature and should be fully disclosed in the notes to the financial statements in accordance with IAS 24 Related Party Disclosures. The related party disclosures are particularly important for a listed entity such as Watson Co. In line with ISA 450 Evaluation of Misstatements Identified During the Audit, all misstatements should be accumulated and therefore the error should also have been included in the audit working papers and adjustment should have been requested.

Other quality control issues include:
– The staffing levels on the audit also appear to be inadequate given that there are only two audit team members. This is again indicative of poor audit planning.
– In addition, it is clear that the audit manager should have been replaced earlier and that Watson Co has failed to provide adequate direction and supervision of the audit.
– The original audit manager, Rodney Evans, has also provided an inadequate briefing meeting prior to the commencement of the audit work. The advice to follow last year’s working papers is inappropriate as the auditor must always be on the look out for new situations and issues such as the new share-based payment scheme.
– Jansen & Co has also failed to monitor the progress of the audit and therefore to update and change the audit plan as necessary during the course of the audit as required by ISA 300 Planning an Audit of Financial Statements. This is evidenced by the fact that the audit clearance meeting is scheduled for next week and the initial manager review is only just taking place. In addition, there appears to be no evidence of engagement partner oversight over the course of the audit fieldwork and it is the engagement partner’s responsibility to ensure that they have reviewed the documentation to ensure that sufficient appropriate evidence has been obtained and that the auditor’s report issued in the circumstances is appropriate.
There appears to be a lack of audit evidence in relation to the firm of external valuers which has been used to value the share options. ISA 500 *Audit Evidence* requires the auditor to obtain sufficient and appropriate audit evidence that the valuation work performed by the management expert is adequate for the purposes of the audit. The auditor must therefore evaluate whether management’s expert possesses the necessary competence, capabilities and objectivity to perform the valuations and whether the scope of their work is satisfactory for audit purposes. The ‘checking out’ of the expert online with reference to a website is clearly inadequate for audit purposes and this again reflects the inexperience and lack of expertise of the audit supervisor and poor audit planning with respect to the staffing on the audit.
1  (a) Audit risk evaluation

Up to 3 marks for each audit risk identified and explained. Marks may be awarded for other, relevant audit risks not included in the marking guide.

In addition, 1 mark for relevant ratios and ½ mark for relevant trends which form part of analytical review (max 5 marks).

Materiality calculations should be awarded 1 mark each (max 4 marks).

- Operating margin and ROCE changes – risk understated expenses/overstated revenue
- Trends within operating expenses and related audit risks, e.g. misclassification of expenses
- Other operating income – risk of overstatement
- Risk of management bias due to listed status (max 2 marks)
- Current ratio and gearing and related audit risks, e.g. understated finance costs
- Effective tax rate and risk of tax expense being understated (max 2 marks)
- Consolidation of foreign subsidiaries
- Recognition and measurement of foreign exchange gains and losses
- Goodwill – audit risk regarding measurement, specifically lack of impairment review
- Goodwill on acquisition of Lynx Co (max 4 marks for detailed discussion)
- Intangible assets – audit risks in relation to unexplained movement in year, whether amounts should have been capitalised and amortisation period (max 5 marks)
- Increased detection risk regarding Lynx Co due to being audited by a component auditor

Maximum marks 24

(b) Audit procedures on the goodwill recognised on acquisition of Lynx Co

Up to 1 mark for each well described procedure:

- Obtain and review the legal documentation, in particular, confirm the targets to be used as the basis for payment of the contingent consideration
- Confirm that the Group has obtained an 80% shareholding and that this conveys control
- Agree the $80 million cash paid to the bank statement and cash book of the acquiring company
- Review the board minutes for relevant discussions including the minute of board approval
- Obtain management’s calculation of contingent consideration, and evaluate assumptions used
- Discuss the 18% interest rate used in determining the discount factor and evaluate the justification given by management
- Confirm that the fair value of the non-controlling interest has been calculated based on an externally available share price at the date of acquisition by agreeing to stock market records
- Obtain a copy of the due diligence report issued by Sidewinder & Co, review for confirmation of acquired assets and liabilities and their fair values
- Evaluation of the methods used to determine the fair value of acquired assets, including the property, and liabilities to confirm compliance with IFRS 3 and IFRS 13 Fair Value Measurement
- Review the calculation of net assets acquired to confirm that Group accounting policies have been applied

Maximum marks 6

(c) Evaluation of Vulture Associate’s audit strategy

Up to 2 marks for each issue evaluated:

- Controls – evidence needs to be obtained to confirm that controls have not changed
- Controls should be tested in a three-year cycle in order to place continued reliance on them
- Group audit team may decide to perform additional tests of control of Vulture Associates do not amend their strategy
- Evaluate status, competence and quality control approach of the internal audit department
- Objectivity should be evaluated where direct assistance is provided
- Consider the type of work – work on receivables is not appropriate due to subjective nature
- Internal auditors have worked on receivables so not objective
- Conclusion on audit quality (1 mark)

Maximum marks 10
(d) Ethical issues relating to request to assist management in preparing an integrated report

Up to 2 marks for each relevant point explained, and 1 mark for relevant safeguard or action:

- Explain the threats to objectivity created – self-review, familiarity and management involvement (1 mark each if fully explained)
- Conclusion as to whether service can be provided, following on from justification
- Suggest appropriate safeguards if engagement accepted, e.g. independent review (1 mark each)
- Explain that audit committee would need to pre-approve the engagement
- Bison & Co to consider competence and resource availability
- Discuss with audit committee (1 mark)

Maximum marks 6

Professional marks
Generally 1 mark for heading, 1 mark for introduction, 1 mark for use of headings within the briefing notes, 1 mark for clarity of comments made.

Maximum marks 4

Maximum 50
Matters to be discussed and individual impact on financial statements

Generally up to 2 marks for full discussion of each matter and impact on opinion.

Lease of testing equipment

- Lease at largest site is material to SOFP at 2.2% of total assets; leases at other two sites are also material at 2.8% of total assets (max 1 mark)
- General requirement of IFRS 16 to capitalise all leases on SOFP as right-of-use assets at PV of lease payments from commencement date (i.e. date asset is available for use)
- IFRS 16 exemption (optional) for short-term leases of less than 12 months with no purchase option hence if client elects, no need to recognise lease on SOFP (n.b. no P/L effect yet as commencement date at year end)
- Short-term lease exemption must be made by class of underlying asset, hence treatment across three sites must be consistent
- To discuss exemption with FD at meeting; if elects not to take exemption across the three sites, assets and liabilities are materially understated; hence the proposed adjustment is correct and a right-of-use asset and lease liability of $475,000 should be recognised
- Alternatively, if client does elect to take exemption across all three sites, then assets and liabilities are materially overstated and right-of-use assets and lease liabilities of $625,000 should be derecognised

Impact on audit opinion:
- If client makes no adjustment, the statement of financial position is materially misstated and the audit opinion should be qualified on this basis with an ‘except for’ opinion

Legal claim

- Claim is material to SOFP at 5.5% of total assets (max 1 mark)
- Provision should be recognised per IAS 37 as unpaid, probable liability at reporting date
- Asset should also be recognised as payment by insurance company is virtually certain
- The asset and liability should be shown separately on the SOFP and not offset; there is no net impact on P/L; as a result both assets and liabilities are materially understated
- Full details of both provision and contingent asset should be disclosed in notes to financial statements

Impact on audit opinion:
- If client makes no adjustment, the statement of financial position is materially misstated and the audit opinion should be qualified on this basis with an ‘except for’ opinion

Asset impairment

- Impairment of $85,000 is not material in isolation to either SOFP or P/L (max 1 mark)
- New competitor is significant change in site’s market and therefore impairment indicator; site is CGU and therefore appropriate to conduct impairment test at this level
- Recoverable amount is higher of value in use and fair value less selling costs; fair value less costs of disposal is $3,515,000 and therefore asset is impaired by $85,000 (client appears to have incorrectly excluded cost of removing assets from calculation but correctly excluded the costs of business reorganisation)

Impact on audit opinion:
- Assets and profits are both (immaterially) overstated; hence if no adjustment made, there will be no impact on the audit opinion in relation to this issue in isolation

Maximum marks

17
(b) Turner Co

Ethical and professional issues and actions to be taken by audit firm

Generally up to 1 mark for each issue and action.

Loan to member of the audit team

Issues:
– Potential self-interest threat to auditor independence
– Key issue is whether ‘the very best deal which the bank can offer’ is made under normal lending procedures, terms and conditions
– If not, self-interest threat created would be so significant that no safeguards could reduce it to acceptable level and Janette should be told not to take loan
– If it is made under bank’s normal lending procedures, terms and conditions, the loan does not create a threat to auditor’s independence and Janette may accept the loan

Actions:
– Discuss terms and conditions of loan with Janette and business manager
– Obtain draft loan documents and review details in order to establish whether under normal lending procedures, terms and conditions
– Inform audit engagement partner, who is responsible for ethical compliance
– Advise Janette on outcome of review and whether she can accept loan and advise business manager of decision explaining rationale/ethical rules

Temporary staff assignment

Issues:
– Potential self-review threat to auditor independence
– Must not assume management responsibilities or provide non-assurance services prohibited by the Code
– Cannot provide accounting and bookkeeping services (including payroll) to audit client which is a public interest entity
– Exception if services relate to matters which are collectively immaterial to financial statements

Actions:
– Discuss details of proposed role of seconded member of staff with payroll manager/other key client contacts in order to establish significance/materiality of role to financial statements
– Advise client of outcome of these enquiries/decision; seems likely that will have to decline assignment of staff member as payroll supervisor as role appears to be material/significant to financial statements - listed/public interest entity, supervisory/management role requiring qualified member of staff on main payroll system.

Maximum 25
(a) Narley Co

(i) Matters to be considered before acceptance of engagement

Up to 2 marks for each matter explained:

- Auditor independence including potentially significant advocacy threat and possible self-review and self-interest threats
- Intended use of report, e.g. solely for bank or wider distribution
- Nature of assumptions and time period covered (in this case two years)
- Availability of experienced, competent staff and time frame for assurance work
- Appropriate safeguards to reduce risks to acceptable level
- Details of PFI to be given to bank, e.g. forecast P/L only

Maximum marks 6

(ii) Examination procedures to be performed

Generally up to 1 mark for each described procedure. Also allow 1 mark for each relevant analytical procedure used to max of 3 marks:

- Check arithmetic accuracy of forecast
- Agree accounting policies consistent with financial statements and comply with IFRS
- Discuss key assumptions with management and assess reasonableness
- Review market research documentation and discuss with management
- Obtain and review customer contracts for new customers to confirm projected growth in revenue
- Obtain written representations from management on reasonableness and completeness of assumptions
- Assess competence and experience of client staff preparing forecasts including accuracy of PFI prepared in previous periods and reasons for any significant variances
- Perform analytical review of key trends; up to 3 marks for analysis of key trends by candidates including:
  - Growth in revenue
  - Cost of sales as % of revenue
  - Declining trend in admin expenses
  - Increase in net profit margin
- Review of capex forecasts and agreement to invoices/supplier quotations
- Recalculate depreciation and ensure correct inclusion of depreciation on new HGVs and warehousing facilities
- Obtain and review breakdown of operating expenses; ensure all items appropriately included, e.g. advertising/marketing costs; additional staff costs for new drivers including recruitment expenses; any trading tariffs with overseas market and any forex implications
- Inspect recent utility bills and assess reasonableness of forecast utility overheads
- Obtain and review documentation for existing loan agreements with bank and draft documentation for new loan and recalculate finance costs

Maximum marks 9
(b) Watson Co

Generally up to 1 mark for each issue discussed:

- Inadequate planning/consultation with client re SBP scheme (ISA 220)
- Complex judgemental area, should have been identified as high risk
- Part-qualified supervisor, inadequate skills and expertise for this listed client
- Treatment of SBP is incorrect, valuation should have been updated at year end for cash-based scheme
- Recognition as equity reserve is also incorrect, IFRS 2 requires recognition as liability for cash-based scheme
- SBP is immaterial quantitatively (extra 1 mark for relevant calculation and comment) but scheme is RPT with directors which is material by nature especially for listed entity
- Error should have been calculated and adjustment requested
- The matter should have been included in the related party disclosure notes in accordance with IAS 24
- Inadequate staffing levels – only two-member team and audit manager should have been replaced earlier
- Inadequate briefing meeting, poor quality advice to follow last year’s working papers – should always be on look out for new situations and issues
- Insufficient monitoring and supervision by audit manager
- No evidence of partner oversight during course of audit work
- Failure to update and change audit plan as necessary during course of audit (ISA 300); clearance meeting is next week and manager review is only just taking place
- Lack of audit evidence re external valuer – competence, capabilities, objectivity, scope of work; reference to website is inadequate and reflects inexperience and lack of expertise of supervisor (up to 2 marks for development of discussion)

Maximum marks 10

Maximum 25
